

Descriptive d128 VDA task sequence with the new VDA16 cross-attention checkpoint
Open VDA16 marker is unconnected and competence_gated (curriculum remained at $\theta=65.0^\circ$)

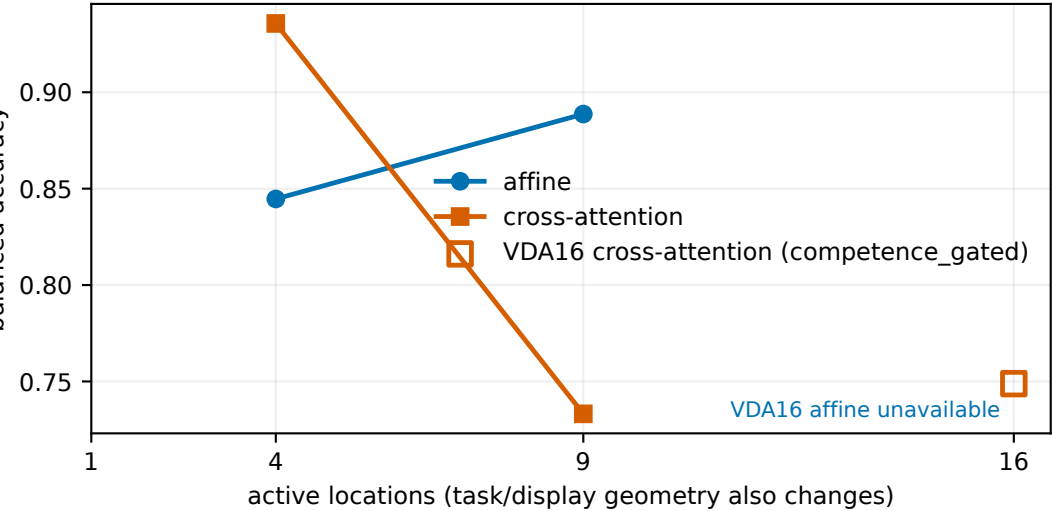

A Valid – invalid response rate
($V=.75$, nearest $\Delta=18^\circ$)

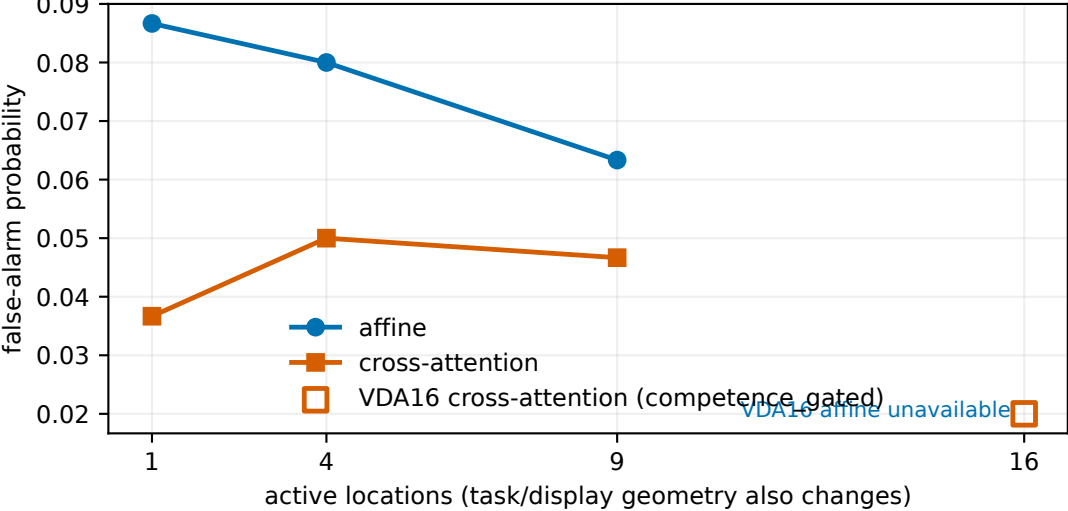

B Final-timestep change decoder

C Final-timestep cued-change decoder

D No-change qualifying-response rate
($V=.75$; no intervention)

Historical and VDA16 cells use separately frozen executable/runtime lineages; VDA2 lacks a compatible modern shard; one checkpoint per cell; not a controlled, replicated, or causal set-size effect.
