

VDA16 crossattn1: held-out paired behavior only
cue fixed at S1; physical change at cued S1 or forced-invalid S16; 300 CRN trials per point

A Change-report probability

B Discrete response frame among qualifying responses

frames are model timesteps, not human reaction time

Bands are 95% evaluation-trial intervals from one checkpoint; they are not training-seed uncertainty. No attention sources are summed or displayed.
