

VDA16 valid-versus-invalid overlays: eight curves per panel
Color encodes displayed cue proportion; line style encodes change location

● 25% displayed ● 50% displayed ● 75% displayed ● 100% displayed ● valid change □ forced-invalid change

Affine element-wise

Cross-attention

The 100% displayed-validity invalid condition is a forced, out-of-policy stress test. Timing is conditional on a qualifying response.
